

PRATHMESH PANDEY

Mumbai, Maharashtra | +91 8828331357 | pandeyprathmesh089@gmail.com

Vidyavardhini's College of Engineering and Technology (VCET)

Bachelor of Computer Engineering

Relevant Coursework: System Design; Data Warehouse Mining; Operating Systems; Algorithms

Vasai, Maharashtra

Expected June 2026

SUMMARY

Curious and hands-on Computer Engineering student with experience building and testing real-world software systems. Strong foundation in Python, APIs, and problem solving, with a growing interest in automation testing, debugging, and SDLC-driven development. Comfortable explaining technical concepts clearly, collaborating across teams, and learning new tools quickly in fast-paced environments.

SKILLS

Programming & Data: Python, SQL, Firebase

Data Science & Analytics: Data Modeling, Predictive Analytics, Exploratory Data Analysis (EDA), Data Cleaning

Visualization & Reporting: Tableau, Power BI, Matplotlib

Machine Learning: CNNs, TensorFlow, Scikit-learn, keras

Soft Skills: Analytical Thinking, Collaboration, Documentation, Problem Solving, Solution Building

PROJECTS

Truth Lens

- Developed an AI-powered misinformation detection platform to analyze news content and identify potentially false or misleading information.
- Integrated machine learning and NLP techniques for text classification, sentiment analysis, and credibility assessment of online sources.
- Built data preprocessing and feature engineering pipelines to improve prediction accuracy and model reliability across diverse datasets.

Fraud Sentinel

- Engineered an AI-driven fraud detection system to identify suspicious financial transactions and anomalous behavioral patterns in real time.
- Applied machine learning algorithms and anomaly detection techniques to improve fraud prediction accuracy and reduce false positives.
- Designed scalable data pipelines for transaction processing, feature extraction, and model evaluation using Python and data analytics tools.

Marine Threat Surveillance

- Prototyped an AI-based surveillance system to detect unauthorized vessels and maritime anomalies using computer vision, machine learning.
- Achieved 95% detection accuracy, improving performance and reliability over traditional maritime surveillance systems.
- Worked in Agile teams and used version control with Git and GitHub to manage iterative model updates.

ACTIVITIES

VCET Students' Council Vasai, Maharashtra Social Media Head Aug 2025 – Present

- Produced high-quality videos and digital creatives, enhancing engagement and contributing to a 35% growth in the account within a year when was working as Deputy Head.
- Streamlined technical execution for promotions and events, leading to a 10% increase in external registrations.

VCET Microsoft Student Learn Club Vasai, Maharashtra Senior Outreach Associate Sept 2024 – Present

- Developed strategic campaigns and digital content, driving a 60% increase in student engagement and event visibility.
- Managed communications and social media outreach, ensuring clear messaging and boosting engagement by 15%.

CERTIFICATIONS

- Full Stack web development (Devtown)
- C++ (Devtown)

ACHIEVEMENTS

- Maharashtra State Innovation Challenge Winner (2024)
- Published IEEE research paper on major project Truth-Lens
